Our Mission and Values

OUR MISSION

To provide the best technology and service to support events, conferences, and meetings with a multilingual focus.

OUR VALUES

Always acting with honesty and integrity

Constantly looking for a better way to do things

Putting our clients' as top priority

Working as a team to achieve success

Providing high-quality products and services

Acting authentically, as our client's trusted advisor

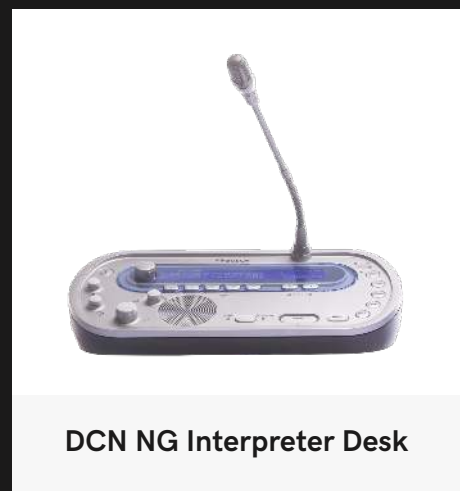

Simultaneous Interpretation

Interpreters working in the room

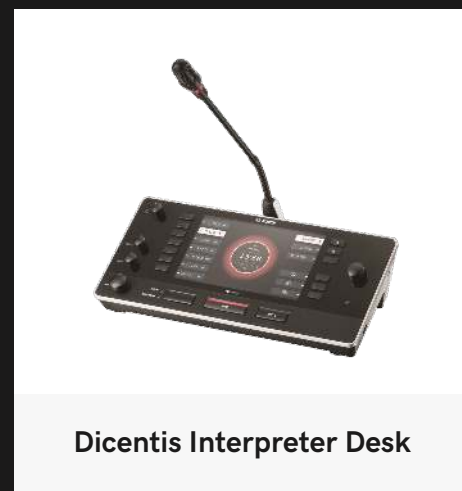

We use only the best, industry-leading Bosch interpreter hardware & ISO-compliant Audipack sound-proof interpreter booths, paired with top-class, end-to-end production and services to match. The interpretation is broadcast to the audience via crisp, digital infrared audio, resulting in clear and intelligible language feeds for any scenario.

Audipack Interpreter Booth

DCN NG Interpreter Desk

Dicens Interpreter Desk

Regardless of scope and scale, our technical producers can custom tailor the best simultaneous interpretation solution for your meeting or event.

Remote Interpretation

Interpreters working remotely

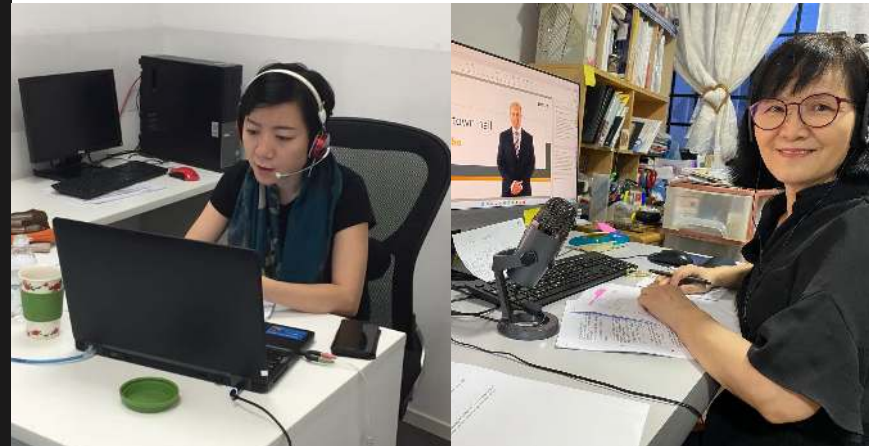

Remote Simultaneous Interpretation (RSI) is the best way to integrate conference-level interpretation with interpreters working remotely, either from home offices or interpreter hubs. This reduces the budget for on-site hardware, interpreter travel/logistics and saves space in-room.

Our world-class interpreters get access to a live video and audio feeds of the speakers and are able to work as if they are in the room. The interpretation audio is then streamed back to the audience, whether they are onsite, online or a mix of both.

For virtual events, we can work with any preferred RSI or virtual event platform. For on-site events, we can distribute the audio via our Congress Rental Network Remote Simultaneous Interpretation App or with our digital infrared receivers. Every event has different requirements and if you aren't sure what you need we are more than happy to advise on a custom solution that works best for you.

Interpreters working from home offices

Interpreters work from their home offices using our digital infrastructure, allowing their live interpretation to be integrated with any virtual, hybrid or live event.

Interpreters working from remote hubs

Studios that provide interpreters with conference level hardware and software to support them when they work remotely.

*AIIIC preferred option

Remote Interpretation App

Our app can be used to access remote interpretation feeds either on-site or remotely.

Virtual Platform Integration

We can implement remote interpretation feeds directly into your virtual event platform of choice.

Infrared Receivers

Our infrared receivers are the perfect choice for your on-site audience to listen to remote interpretation feeds.

SETUP

DISTRIBUTION

Conference Microphone Systems

We exclusively stock Bosch conference microphones. We deem them to be of the highest quality and equipped to facilitate all possible interactive discussion needs. Each conference microphone unit includes an on/off button and a built-in loudspeaker. Also known as push-to-talk mics, they eliminate the problems of noise and feedback that exist with conventional microphones.

Each of our systems can integrate with your video or teleconference system, as well as our PTZ cameras. Our microphones are ideal for use in boardroom meetings, round table discussions and large conferences with audience participation. They are frequently used for major international conferences, bilateral negotiations and intergovernmental meetings.

NFC cards can be utilised with our microphone systems to allow delegates to move freely between microphones, ideal for meetings without set seating, but the need for software control. Delegates tap their NFC card on a microphone, and that unit will be allocated to that person, allowing their name to appear in speaking queues and on the microphone map.

Our Range of Conference Microphones

CCS 1000

- Ideal for small to medium scale meetings
- Easy to set up, plug and play
- Extremely simple, intuitive design
- Suitable for dry hires
- Built-in audio recording
- Full meeting control via web browser

DCN Next Generation

- Ideal for medium scale meetings
- Delegate identification and registration
- Language Integrations
- Suitable for dry hires

- 4.3 inch touch screen
- Can be fitted with long or short stem
- Language Integrations

Dicentis Multimedia

- To completely fulfil all multimedia conference needs
- Can integrate with live video
- Users can browse documents, share information, and access internet
- Language Integrations
- Scalability (large enterprise level)

Automatic PTZ Camera Integration & Software Control

Panasonic AW-HE130

Automatic PTZ Cameras

Our conference microphones can be integrated with our broadcast-quality PTZ (pan-tilt-zoom) cameras to create an automated video experience. When the conference microphone is activated, the camera automatically rotates to the position of the speaker and the captured video is displayed on the screen. This is ideal for large meetings where delegates are sitting far apart or if remote video of the event is required.

Avonic CM70-IP-B

Software Control and Queuing

Our microphone systems utilise a software queuing system. This system can be used with allocated seating to associate a name with a microphone or NFC cards can be coded with delegates details, allowing them to sit anywhere. The chairman can then select the next speaker from a clear list of delegates requesting to speak and can have a clear floor plan of the active speakers.

Silent Conference

Silent Conference (also known as Silent PA, Silent Breakouts, or Silent Disco) allows multiple presentations to take place simultaneously in a space without noise interference. From a small silent theatre space in the middle of a noisy exhibition to dividing a thousand-person plenary instantly into breakout groups, we can support events of all sizes.

Each participant carries a lightweight receiver and wears a pair of headphones. Using this equipment they can select their desired channel, control their volume and seamlessly move between areas to listen to various presentations. Digital Infrared audio distribution offers crisp HD-quality audio and 32 simultaneous channels per system.

Tour Guide Systems

Our digital system is the most versatile and advanced wireless listening system available.

Ideal for:

- Whispered simultaneous interpretation
- Tour group communications
- People that are hearing impaired

Tour Guide Communication

Tour groups soon get bored and distracted when they can't hear the guide. Our tour guide system ensures your guests can hear everything.

It saves your tour guide's voice allowing them to present for longer, and keeps the presentation private since only those with receivers & headsets can hear the tour.

Simultaneous Whisper Interpretation

The interpreter listens to the speaker through ambient audio and whispers the interpretation through a transmitter to delegates with a receiver. Ideal for mobile interpretation situations.

One-way System

Best for simple one-way communication.

- Up to 50m range.
- Up to 100 channels available.
- Rechargeable with 10 hours of life on a single charge.
- 2.4 GHz means no broadcasting license required.
- Intuitive user controls.
- Clear digital audio.

Two-way System

Best for all your two-way communication needs.

- Up to 100m range.
- "Talk back" function allows delegates to ask questions.
- Rechargeable with up to 18 hours of life.
- 915-928 MHz means no broadcasting license required.
- 3 modes of use for a wide range of applications.
- Clear digital audio.

Personal Hearing Loops

For delivering clear sound to the hearing impaired.

Our personal hearing loop system utilises digital wireless transmission via telecoil assistive listening devices to allow anyone the ability to hear any meeting or event audio. It is easy to use, cost-effective and can be used for events of all sizes with any number of delegates.

Quality Solutions

Congress became a leader in the interpretation and conferencing market by providing end-to-end solutions that combine the highest quality hardware with world-class technical expertise. Over our many years of operation, we have refined the delivery of our professional service to get it to where it is now.

We interface with your preferred audio-visual supplier and liaise directly with onsite contacts to manage all logistics – delivery, installation, operation and bump out, providing you with peace of mind. Our Technicians are rigorously trained and qualified through Bosch, at an expert level. Their problem-solving and agile thinking skills ensure a trouble-free event.

We pride ourselves on being our client's trusted advisors. Guiding them through all available options to find the ideal solution for their unique needs. Whether you know exactly what you need, or have no idea where to start, reach out and we can help.

Testimonials

Our sincere thanks go to you and the Congress teams for an outstanding preparation and management of the event. Through your very expert and professional approach, combined with a calm and friendly interaction style with all of us, you gave us full confidence and peace of mind that everything would go well - and it did!

- **Christine do Phan, International Service for Human Rights**

Can't thank you and the team enough for the great work you did and how flexible and responsive you were to all our requests. The guys on the ground were also extremely helpful and excellent to deal with. I continually expected you to say something wasn't possible in the timeframes, but you made everything work which in turn made the meeting possible (which was a big success) so thank you very much. Thanks again I look forward to working with you in the future.

- **Sam Curtis, Department of Foreign Affairs and Trade**

Thank you for all that you did to help the NLA and the CDNL make their inaugural online conference such a success. You will have received thank you emails from quite a few people already. This is my personal thanks for your understanding, patience with my lack of technical knowledge and occasional tardiness in joining our meetings. Also for your patient response to my many emails. You did an amazing job with the speaker technical checks, quickly building a good rapport. I had not expected last night to be quite so intense but of course, it was busy! You handled the requests and questions coming from all directions so calmly and maintained the flow of the overall event - awesome.

- **Meredith Walton, National Library of Australia**

Partners

Congress is an active member of the International Congress Rental Network - individual companies tied together with the common purpose of providing high-quality services using Bosch equipment. Being a member enables us to tackle events of any size, knowing we will have support from our partner companies. Congress Australia won International Member of the Year in 2016, Bosch Member of the year in 2018, and also APR member of the year in 2013-2019.

Bosch is the largest supplier of Congress equipment globally. We are proud to rent and sell Bosch equipment.

- Bosch has many levels of conference microphone systems, each one exactly meeting a particular market requirement.
- Bosch conference solutions are used by all kinds of customers, ranging from small-sized organizations to multinational corporations, as well as local, regional and national governments and international summits.
