Our products and services include:

- Remote Interpretation & Online Video Interpreting
- Simultaneous Interpretation
- Conference Microphones
- Camera integration with Conference Microphones
- Hybrid/Virtual Meetings & Events
- Temperature Screening
- Silent Conference
- Tour Guide Systems & Personal Hearing Loops
- Voting / Audience Response

Cutting Edge Technology

Our active membership of the Bosch Congress Rental Network means our conference microphones are on the leading edge of what is available globally.

Our Bosch Dicontis conference microphones are built to meet all of your interactive discussion needs. Each conference microphone unit includes an on/off button and a built-in loudspeaker. Also known as push-to-talk mics, they eliminate the problems of noise and feedback that exist with conventional microphones.

NFC cards can be utilised to allow delegates to move around freely between microphones. Each card has a unique identification chip that, when activated, displays the delegates name on the speaker list. Other participants will immediately know who is speaking independent of their location.

The microphones can also be programmed to display your organisations logo, creating a professional conferencing solution that also reflects the branding of your event.

Cutting Edge Technology

Each of our systems can integrate with your video or teleconference system, as well as our PTZ (pan, tilt, zoom) cameras. Our PTZ cameras offer superb visual quality and integrate with our microphones. This means they automatically follow whoever is the active speaker at any given time. The technology is continually being developed and leads the market in terms of features and capability.

They have been used for major international conferences, bi-lateral trade negotiations and many government meetings. The applications are endless and can be applied to any situation where an interactive discussion is required.

Government-Grade Security

From a security standpoint, our Bosch Dicontis wired conference microphones are the best choice for high-level summits. They use internationally recognised encryption technology to offer government-grade security. This means your event is best protected from eavesdropping, unauthorised access and data tampering.

- Employ TLS-SSL (Transport Layer Security, secure sockets layer) - the most powerful, legal security on the market, used to secure bank transactions and highly sensitive data
- Installs automatically using a unique key generator to ensure a secure connection
- Maintained by IT professionals with regular updates by Microsoft and Bosch
- The Windows server platform offers off-the-shelf solutions from RAID and dual power supply, to Hyper-V and seamless fail over solutions by means of virtualization
